

# MAKING MINING WORK

## The Mineworks Mineworker

The Mineworks Mineworker is the company's first custom-built machine available for hire or purchase. Built to the highest possible safety standards, the Mineworker can perform a variety of tasks, and is ideally suited to working in limited space environments.

### The versatile option

The Mineworker comes standard with a powershift transmission and electro-hydraulic telescopic arm offering a smooth and precise operation of its 10.2 metre reach and 3.3 tonne lift capacities. The quick-hitch mounted 180 degree slewing extension platform is the ideal aerial work platform. When combined with the variety of custom quick-hitch attachments, which include forklifts, hydraulic grabs, general and multipurpose buckets, the Mineworker offers real versatility.

Its small body and nimble operation make it perfect for confined areas and is suitable for both underground and surface work. The machine can be used for material handling, as it offers both forklift and crane capabilities.

### A safe choice

The Mineworker has been designed and manufactured to meet the highest possible safety standards. It meets all the requirements for Australian Standard AS1418.10, with certified design registration for both the platform and carrier, ROPS/FOPS cabin.

The Mineworks can be operated by one person, and radio remote control from the work platform allows unhindered operation, free of cables.

Standard safety devices include interlocks on the park brake, stabilisers and single key remote activation – the operator maintains control at all times.

A built-in motion control system protects the work platform against forward overload, and all platform and attachment operations conform to the required standards.

## The customisable solution

Because the Mineworker has complete customisable body, it can be adapted and designed to suit specific requirements. For example, it can be built as a fully-equipped Charge-Up unit, tool carrier, maintenance vehicle and more. The engineering team will develop specific solutions to suit client's needs.

### Always on hand to help

The Mineworker is fully supported and backup is provided by Mineworks Technical Services, 24 hours a day, seven days a week.

## Key features

- Telescopic arm with 10.2 m reach
- Lift capacity of 3.3 ton
- Powershift transmission
- Hydraulic quick hitch
- Quick-hitch mounted 180 degree slewing extension platform
- A variety of custom quick-hitch attachments available, including forklifts, hydraulic grabs, general and multipurpose buckets
- One-man operation
- Meets the highest possible safety standards: Australian Standard AS1418.10 with certified design registration for both the platform and carrier, ROPS/FOPS cabin
- Complete customisable body to suit specific requirements. For example, it can be built as a fully-equipped Charge Up Unit, tool carrier, maintenance vehicle and more
- Suitable for both underground and surface work
- Ideal for limited space environments because of its small body and nimble operation
- Full support and backup by our own Technical team
- The machine can be used for material handling, with forklift and crane capabilities.
- The Mineworker is also capable of remote operation
